Welcome to the 2017 Heavy Construction, Equipment & Machinery Awards

Within the construction industry, companies and individuals work tirelessly to ensure the mass developments of the critical infrastructure that we use day to day are underway. The perseverance of those, regardless of the uncertainty of this market, is one that is truly remarkable. These innovative, game-changers who are paving the way to achieve such high goals deserve to be rewarded.

Which is why, the 2017 Heavy Construction, Equipment & Machinery Awards aim to recognise those leading-lights of the industry who strive to prepare, develop and maintain these heavy builds around the globe. Through their dedication, inventive thinking, and impeccable level of quality, they have made extraordinary accomplishments.

Best Construction Services Company - Munster

Marlhill Construction Services Ltd are general building contractors, conservation and restoration contractors, small civil and amenity contractors, fit-out contractors, project managers, site assessment, build cost estimates and domestic waste water treatment advice. We profile the firm to find out more.

Founded in 2011, Marlhill focuses on sound financial and management principles, traditional craft skills and professional management in all project work in addition to technical and plant resources that has allowed the company to gain a reputation for high quality commercial and education projects since its formation.

The company undertakes projects throughout the Munster and surrounding areas with its base office situated in Tipperary. Among the firm's recently completed projects in the area is a 1.4million Euro Stable Barn and Civils project for Coolmore Stud. The project involved a 100-acre green field site which has been developed in to a working stable barn enterprise, with an all-weather lunging ring, covered lunging ring, hay barns, staff accommodation building, waste water treatment system and rain harvesting system. A main 6m wide access road was constructed with an auxiliary 4.5m wide internal road network to access new layout paddocks. All services were provided to each paddock and a network of service ducting was installed for future development such as CCTV, water and electrical power. The challenges associated with this project was encountering rock in parts of the build positions and site services routes on the site and it was important to programme these works, first to allow the project to flow from a time frame point of view as not to hold up ongoing other works on site. Despite these challenges Marlhill completed the project on time and on budget.

Ultimately, Marlhill Construction Services Ltd are always looking for ways to improve the service it offers to its clients, and as such all its staff are involved in ongoing CPD in relation to new products available in the market that might enhance operations and introduce new methods of constructing. Technology now has a major influence in a profitable company whether it is office management systems, project estimating, site equipment, site machinery, staff compliance or Health and safety systems. Therefore, moving forward the firm will continue to embrace the very latest offerings in order to ensure that its services are at the forefront of the market and meet its clients' ever evolving needs.
